DETAILED ACTION

1. This application has been reviewed. Original claims 1-24 are pending. The rejection cited stated below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by (DTI Networks) **WO 00/54485** [hereinafter DTI Networks].

As per claim 1, DTI Networks discloses a method of processing a service request in an IP multimedia core network, comprising the steps of:

receiving a service request initiated by a first user, for a second user receiving a call from user A to user B) (see page 20, lines 21-25);

forwarding the received service request to a unit for processing a service (CPS) (see page 47, line 20, to page 48, line 2);

receiving a processing result from the processing unit (switch receiving response back from PCS) (see page 46 lines 1 to page 47, line 5); and

first determining, based on the received processing result, whether a service request processing for the second user is to be stopped (see page 47, line 20-48, line 2).

Art Unit: 2157

As per claim 2-4, DTI Networks discloses the method according to claim 1, wherein the first determining step further comprises the steps of:

checking whether the processing result received from the processing unit includes an indication for stopping the service request processing for the second user, and when the indication is present, stopping the service request processing for the second user (see pages 41, line 16 to page 42, line 6).

As per claim 5, DTI Networks discloses the method according to claim 1, further comprising including destination identifiers in the service request forwarded to the processing unit and the processing result received from the processing unit, the first determining step further comprising the steps of:

comparing the destination identifiers of the service request forwarded to the processing unit and the processing result received from the processing unit, and stopping the service request processing for the second user when the compared destinations identifiers are different (see page 24, lines 13-16).

As per claim 6, DTI Networks discloses the method according to claim 1, further comprising the step of: second determining, based on the received processing result, whether to forward the service request to a third user (see page 41, line 16 to page line 6).

As per claims 7-11, DTI Networks discloses the method according to claim 6, further

Art Unit: 2157

comprising the steps of including destination identifiers within the service request forwarded to the processing unit and the processing result received from the processing unit;

the second determining step further comprising the steps of:

comparing the destination identifiers of the service request forwarded to the processing unit and the processing result received from the processing unit(see page 41, line 16 to page line 6); and

switching to originating mode and forwarding the service request based on the destination identifier included in the processing result when a determination is made that the compared destination identifiers are different (see page 41, line 16 to page line 6).

As per claims 12-24, the claims include features similar to claims 1-11, thus claims 12-24 are rejected same rational as claims 1-11.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
